

## Section #1 Robot Interview

---

1. Can you identify some of the components from the REV kit that you used on your robot using the correct name for each item?
2. Tell me a little bit about how you wired your robot.
  - a. Was there a reason to wire it like you did?
3. Explain the program you created to control your robot.
  - a. Is there anything special about the code that helps you improve your performance?
4. What was the most challenging part of building your robot?
